21.3.7   **Reflection**

Amazing work on getting your first full MERN-stack application up and running! You could build applications like this in numerous ways, but the structure you've set up provides you with a nicely organized way to think about and work with the app.

We accomplished the following in this lesson:

- Implemented the tools to manage the full-stack MERN application for both production and development environments.

- Organized and laid out the client-side React application files.

- Used the Apollo Client library to consume the GraphQL API.

- Viewed thought data in the React app.

We've set up a homepage, but there's still a lot more to do for the Deep Thoughts app! Let's press forward and set up some of these other pages using a library called React Router.

Lesson Code Snapshot

Download the **code snapshot** **(https://static.fullstack-bootcamp.com/module-projects/21-MERN/21.3.zip)** for this lesson to compare with your own code. It's okay if your code isn't exactly the same— use this code snapshot as a starting point for the next lesson.
